MINUTES TAKEN FOR UCS-TRAILER.-EXTENSION

Project: UCS Trailer - Graph Search Assignment
Date: 4th November 2026
Time: 5:00 PM - 6:00 PM
Venue: Magharibi Place

Members Present :

Kipngeno Brian - 168049
Sean Muthomi - 190119
Alvin Kyalo - 192085

Agenda

1. Understanding the assignment requirements.
2. Discussing the graph representation.
3. Reviewing the search algorithm implementation.
4. Testing and finalizing the assignment.

MIN 01: Assignment Discussion

The group reviewed the assignment requirements and discussed the tasks that needed to be completed.

MIN 02: Graph Representation

The group discussed representing different locations as nodes and their connecting routes as weighted edges. The importance of assigning distances between connected locations was also considered.

MIN 03: Algorithm Implementation

The group reviewed the Uniform Cost Search (UCS) algorithm and discussed how it could be implemented in Python to determine the shortest route based on the given graph.

MIN 04: Testing and Results

The group discussed testing the implemented algorithm to ensure that it correctly explored the graph and returned the route with the lowest total cost.

MIN 05: Finalization

The members reviewed the assignment requirements and identified the remaining checks needed before submission, including the code, outputs, and explanations.

Adjournment

Scheduled end time: 6:00 PM.

Minutes Prepared By: Alvin Kyalo - 192085
